Technical Skills and Interests

Languages:- Python | SQL | Java | HTML

Libraries:- TensorFlow | PyTorch | Scikit-Learn | Pandas | NumPy | OpenCV | Langchain | MLFlow | FastAPI.

Dev & Cloud Tools:- GitHub (Github-Actions) | Docker | Kubernetes | CICD | Power-BI | AWS | GCP

Database:- MySQL | PostgreSQL | Vector Databases (Chroma-DB, Milvus, Qdrant, LanceDB) | Pinecone

Specialized Fields:- Deep Learning | Generative & Agentic AI | Image Processing & Computer Vision.

Other Skills:- Hugging Face | Ollama | LangGraph | Autogen | Web Scraping | Linux

Experience

Deloitte | Pune

January 2026 - Present

AI and Data Science Engineer - II

- Architected an **AI-powered business intelligence and partner discovery platform** using **Python, LLMs, RAG, Multi-Agent AI, FastAPI, and GCP**, automating small-business discovery, qualification, and research for U.S. project opportunities.
- Engineered two scalable data pipelines, processing **250+ GB of U.S. government spending data** into BigQuery and continuously enriching business profiles from **web, social, and internal data sources**.
- Designed a **BigQuery + Vector DB knowledge architecture** with persistent organization intelligence, reducing repetitive data collection and improving **data consistency and retrieval accuracy**.
- Built a **Multi-Agent AI Assistant using LangGraph and specialized tools** to reason across structured, unstructured, and web data, delivering contextual insights through **text, tables, and visualizations**.
- Automated organization research and onboarding, **reducing manual effort by ~60% and saving several hours per research cycle**, while improving **speed, consistency, and accuracy** of business qualification.

Verge Impex | Mumbai

November 2024 – January 2026

Machine Learning Engineer - II

- Developed a secure, offline, on-prem AI-based health monitoring system for the medical department with an agent workflow that interacts with diverse knowledge sources to provide high-accuracy insights.
- Built a FastAPI with automated test coverage and implemented a containerized system for seamless local server deployment with CICD.
- Developed a system to streamline tracking and monitoring operations, enhancing efficiency in inventory management and operational oversight.

WESEE (Indian Navy) | Delhi

July 2024 – October-2024

AI Engineer

- Built a system to extract and structure unstructured data from Pakistan news and defense sources, enabling efficient query-based retrieval. Deployed an intelligent agent to analyze aggregated data and provide actionable insights.

AIEnsured Pvt Ltd | Noida

June 2022 – July 2024

Machine Learning Engineer

- Built scalable ML pipelines for data processing, model training, and deployment, improving performance by 10-15%. Generated **85% accurate synthetic structural data**, reducing costs and improving efficiency.
- Developing Retrieval Augmented Generation (RAG) pipelines for document-based question answering using various large language models.
- Created interactive Power-BI/Tableau dashboards to provide efficient and user-friendly data insights, driving improved decision-making.

Projects

Sentiment Analysis of Articles

- Preprocessed large datasets and developed an LSTM model with 78% accuracy for sentiment classification, while fine-tuning a pre-trained Transformer model to achieve 85% accuracy.
- Developed and deployed a FastAPI backend for real-time sentiment analysis and article categorization, containerized using Docker for seamless deployment and scalability.

Road Scenario Detection

- Successfully developed a robust road scenario object detection system using YOLO, OpenCV model, significantly improving
- Road safety by accurately identifying and tracking vehicles and objects, with 85% precision and 87% recall in real time.
- Develop Streamlit app for Camera, Image and video

Multi Document Chatbot

- Developed information retrieval application, designed a RAG system using vector search embedding, LLama2-7b and Langchain.
- Build Streamlit/Gradio app and deployed on Hugging Face Hub for QnA.

Education

B.Tech in Computer Science (Specialization in Data Science)

Aug 2018 - May 2022

ITM University, Gwalior, INDIA

Publications and Certifications

- ISRO – Python Programming *Jan 2021*
- Nelumbus Educare – Machine Learning *Nov 2020 - Dec 2020*
- Nelumbus Educare – Deep Learning *June 2021 - July 2021*
